

pyramid assembly instructions:
 cut along outside edge of the pyramid (do not cut off tab "a"). gently fold the edges of each panel. fold panel into a pyramid shape, tape or glue tab "a" under the edge of "b".

EXPERIMENTS have been done with pyramids that have the same proportions as the one you are now holding in your hand. the findings of these experiments suggest that the energy within the pyramid is transformed in such a way that it slows down the rate at which organic matter deteriorates and decomposes.

the flavor of foods confined in the pyramid's center was noticeably enhanced, and the freshness of the food itself was preserved for a surprisingly long time.

if you would like to try an experiment of your own, find an area free of electromagnetic interference (away from t.v. set, etc.) - outside is real good. using a compass, align one of the faces to magnetic north, place some object inside the pyramid for a while, and observe. let us know what happens.

have fun,
 utopia

"b"

tab "a"
